How to set starting days of current month in a DateTimePicker? I have DateTimePicker on WPF page, I want to set all dates from current month (starting from last day of current month) and user can pick a date, also when picking date I want to set selected day to first day of that month(as mentioned above). Currently I have calendar working, but when page is loaded last day of current month and user picks a date that date is set as a selected date, but I also want to set current first day of current month as a selected date, How can I do that. I tried to use DateTimeHelper class, but it doesn't seem to work on all dates, I set like this:

```
DateTimeHelper.setCurrentDayOfMonth(dateTimePickerDate, (dateTimePickerMonth + 1), (dateTimePickerYear), (int)1);
```

Update: I have DateTimeHelper.setCurrentDayOfMonth(dateTimePickerDate, (dateTimePickerMonth + 1), (dateTimePickerYear), 1); method to set first day of current month and DateTimeHelper.setSelectedDate(dateTimePickerDate, (dateTimePickerMonth + 1), (dateTimePickerYear)); method to set selected day, but my problem is, after first day is setted there is no way to set selected date of current month, DateTimeHelper.setSelectedDate(dateTimePickerDate, (dateTimePickerMonth + 1), (dateTimePickerYear)) method returns always that day, it's in radoncal calendar, so the method is setted to that day. A: Here is the code for setting first day
